

Environ II™ floor warming systems are available in a variety of mat sizes and voltage applications to meet your personal warming requirements.

The following pricing guide will help you with estimating the system expense portion of your floor warming project. Simply estimate the total square footage of the “warmed area” of the room and select the mat size best suited to the project (your project may require the use of multiple warming mats).

Don't forget to add the cost of system installation, electrical hook-up, and your choice of control/thermostat (see companion price sheet) to finalize your project pricing.

120 Volt Environ II™		For carpet, floating wood, and laminate floor warming applications.
